   (b) Drug Abuse and its impact on Mizo Youth
   (c) Public Employment and Artificial Intelligence: Threat or Boon

2. Write a précis of the following passage providing a suitable title. **(1x10=10)**

In the contemporary digital epoch, technology has profoundly transformed the nature of human communication, enabling instantaneous interaction across vast geographical divides. Paradoxically, however, this unprecedented connectivity has coincided with a gradual attenuation of the depth and authenticity of human relationships. Virtual exchanges, though efficient, frequently lack the subtle emotional inflexions and non-verbal cues intrinsic to face-to-face discourse. Social media platforms, while fostering rapid dissemination of ideas, often promote superficial engagement quantified through ephemeral metrics such as "likes" and "shares" rather than cultivating sustained emotional resonance.

The convenience of digital messaging has, in many cases, supplanted the habit of in-person gatherings, thereby eroding the intimacy that physical co-presence uniquely nurtures. Although technological tools undeniably bridge distances and expand the scope of interaction, excessive dependence on them risks substituting enduring interpersonal bonds with fleeting, shallow connections. Striking a judicious balance between digital efficiency and authentic human contact is thus imperative for preserving relational richness.

3. Read the following passage carefully and answer the questions given below:

Pollution is commonly understood as a technical problem of smoke, sewage, and solid waste, but this definition is deceptively narrow. To treat pollution merely as dirt to be cleaned is to miss its fundamental nature. Pollution is, in economic terms, an externality - a cost of production that the producer does not pay, but transfers to the public. When a factory releases effluent into a river, it is not just polluting water; it is privatizing profit while socializing loss. Therefore, controlling pollution is not an act of charity towards nature, but an act of economic justice and of reclaiming what belongs to the commons.

The conventional discourse argues that pollution control hinders development, particularly for developing economies like ours. This argument rests on a flawed accounting system. It measures growth by Gross Domestic Product while ignoring the depreciation of natural capital. If a forest is cut and sold as timber, GDP rises. If children fall ill due to the resulting dust and require hospitalization, GDP rises again due to medical spending. This is not growth; it is an illusion of growth built on the liquidation of our future. A critical analysis reveals that pollution is not a by-product of poverty, but often a by-product of a specific model of affluence that equates consumption with well-being.

Furthermore, pollution is profoundly undemocratic. Its burden is never shared equally. Studies consistently show that polluting industries, dumping grounds, and highways are disproportionately located near communities with the least political power. The affluent can buy air purifiers, bottled water, and homes away from industrial zones. The poor cannot. Thus, clean air and clean water cease to be rights and become commodities. When we talk about controlling pollution, we are therefore talking about the fundamental right to equality. An environment divided into clean zones for the rich and toxic zones for the poor is not a developed environment; it is environmental apartheid.

Another hidden dimension is the psychology of distance that modern life enables. The urban consumer who orders goods online rarely sees the packaging waste mountain it creates, or the diesel smoke of its delivery. The technology that connects us also disconnects us from the consequences of our actions. This engineered invisibility is what makes pollution persist. We have created a system where waste disappears when it leaves our sight, but in reality, there is no "away" to throw things to. The planet is a closed system. Controlling pollution therefore demands not just better technology like filters and treatment plants, but a confrontation with this culture of detachment and perpetual consumption.

Finally, the greatest danger is not pollution itself, but the normalization of it. When smog becomes a season, when rivers foaming with chemicals becomes a common sight, when we check the Air Quality Index before letting children play outside, we have lowered our baseline of what is acceptable. This psychological adaptation is more dangerous than any single pollutant because it kills the political will to act.

Hence, controlling pollution cannot be reduced to planting a tree once a year or banning a single plastic item. It requires three shifts: first, from voluntary compliance to strict accountability where the polluter pays; second, from treating environment as a sector to treating it as the foundation of all economic policy; and third, from individual guilt to systemic reform. The question is not whether we can afford to control pollution. The critical question that skilled observation reveals is whether we can afford not to.

(i). Answer the following questions: **(2x5 = 10)**

(a) The passage says "privatizing profit while socializing loss". Critically analyze how this economic principle explains why factories prefer to pay fines rather than install pollution control systems. What does it reveal about who holds real power?

(b) The author calls GDP growth from deforestation and subsequent hospitalization an "illusion of growth". Explain the flaw in our accounting system that this example exposes. Why is this illusion dangerous for a developing economy like Mizoram?

(c) What does the author mean by "environmental apartheid"? Analyze why pollution is described as "profoundly undemocratic" and how economic status determines one's right to clean air.

(d) According to the passage, "there is no 'away' to throw things to". Analyze how modern technology and online consumer culture create an "engineered invisibility" that sustains pollution.

(e) The passage argues that "normalization" of pollution is more dangerous than pollution itself. Critically explain the psychological process called 'Shifting Baseline Syndrome' and how it kills political will to act against pollution.

(ii). Find appropriate synonyms of the given words in the above passage: **(1x5 = 5)**

(a) Fallaciously (b) Retrieving
